PowerVent®

**Revolutionary new
innovative flue system
only by DRU!**

Position your fire wherever you wish!

PowerVent®

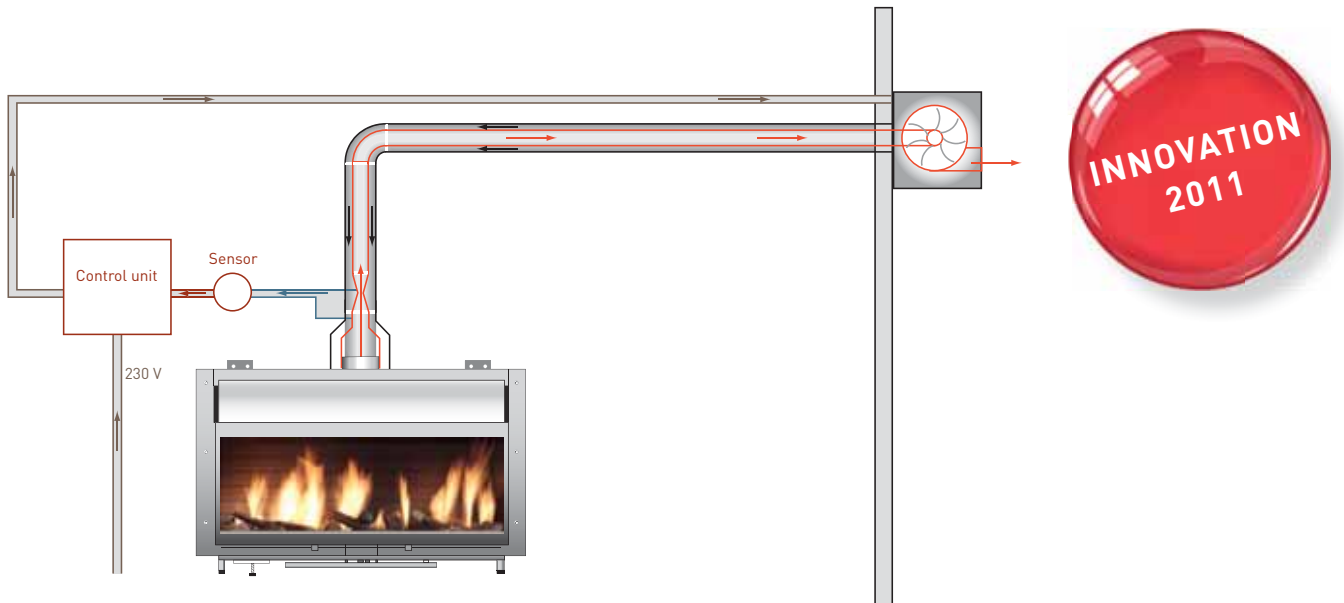

With the new **DRU PowerVent® system** a beautiful gas fire can now be positioned virtually anywhere

With DRU's new **PowerVent® system** you can now place a beautiful gas fire almost anywhere in your home. Now much easier to fit because of the limited diameter of the flue ducts DRU gas fires can be installed up to least 20 metres in length. The outdoors can be reached horizontally, vertically or by means of numerous bends. You can even go through the restricted floor and wall spaces. This flexible installation option enables almost any DRU gas fire to be placed any where in your home, or in commercial locations such as a restaurants, hotels or showrooms.

The benefits of **PowerVent®**

- An Ideal solution for terraced houses, apartments or other situations where it was previously impossible to flue a DRU gas fire.
- The fire can be positioned in the middle of a room and the flue can be installed, for example, through the wall or floor space.
- Inexpensive and an affordable solution to fluing problems.
- Flues can extend for 20 metres in any direction.
- Small flue duct diameter of just Ø 100mm allows for easier concealment.
- Compact Powerbox can be positioned on the outside wall or just below the roof, resulting on no noise.

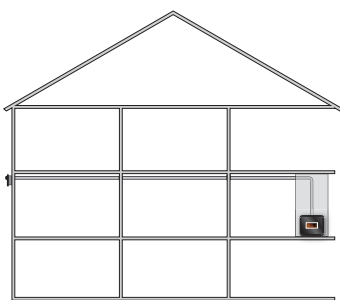

How does it work ?

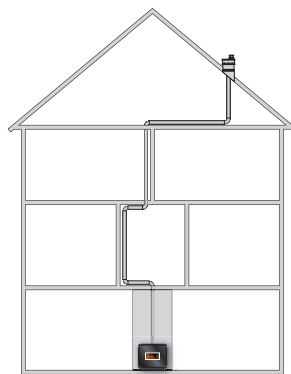

The system is based around the DRU PowerBox which can be fitted on the outside wall or just below the roof eaves. Within this Powerbox there is a fan system which extracts the flue gases and also provides the supply of fresh air required for combustion. A Venturi tube is placed just above the fire and is connected to a control box which ensures that the system will work correctly with almost every fire in the DRU range.

Please note!

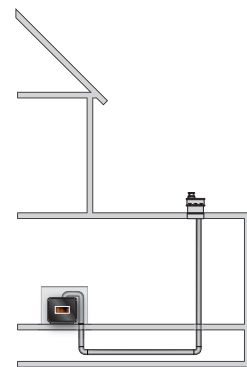

- The **PowerVent® system** is only available from selected dealerships.
- The **PowerVent® system** is only suitable for DRU Balanced Flued gas fires which are equipped with a double thermocouple, each rigorously tested to work with this system (take a look at www.dru.nl/powervent for a list).
- A comprehensive installation manual is available for the **PowerVent® system**.
- The **PowerVent® system** is a unique and patented system by DRU.

up to at least 20 metres horizontally or vertically

numerous BENDS are possible

through the restricted floor and wall spaces

What do you need?

- PowerVent® package (Venturi, Powerbox, Control unit)
- Flue duct with a diameter of 100 mm instead of 150 mm
- Electricity cable for the control system
- Socket for the control system (230 V)

Venturi

Powerbox

Control unit
